

# 10.4

## Circumference and Arc Length

The **circumference** is the distance around a circle.

What is the connection between the diameter and the circumference?

**Ancient mathematicians found out that the circumference is about a little more than 3 times the diameter.**

**They found out that that it's more like 3.14.....and so on**

**Instead of using this long ongoing number they have rounded it to 3.14**

**This is otherwise known as**

**$\pi$  "pi"**

# Circumference

3.14159265358979323846...

$\pi$  is usually  
rounded to 3.14

$\pi \approx$  or

Approximately

# *PRACTICE*

*Approximate Form*

$$C = \pi d$$

*Exact Form*

$$C = \pi d$$

# REVIEW

1) Find the circumference of the following circle:

2) Given the circumference, find the radius:

# Arcs

Minor arcs are the \_\_\_\_\_ arc between two points.  
Major arc is the \_\_\_\_\_ arc between two points.

# Central Angles

# Arc Measures

$$m \widehat{AB} =$$

$$m \widehat{ABC} =$$

$$m \widehat{BAC} =$$

$$m \widehat{ACB} =$$

# Fraction of a circumference

# ***What is Arc Length??***

## ***Arc Measure***

***vs***

## ***Arc Length***

**This is the measure of an arc in relation to the central angle.**

**The is the length of the arc as part (fraction) of the circumference**

# ***Comparing Circles and Arcs***

**What can you tell me about the arc measures of both circles?**

**What is the arc length of Circle A?**

**What is the arc length of Circle B?**

# ***Finding Arc Length***

**What is the arc length of the red arc?**

# Formula for Arc Length

$$\text{Arc length} = \frac{x}{360} \cdot C$$

# Formula for Arc Length

$$\text{Arc length} = \frac{x}{360} \cdot \pi d$$

# ***Practice***

***Radius = 24cm***

**1) What is the arc length of  $\widehat{AB}$ ?**
