Essential Question How can you use integers to represent the velocity and the speed of an object?

On these two pages, you will investigate vertical motion (up or down).
- Speed tells how fast an object is moving, but it does not tell the direction.
- Velocity tells how fast an object is moving, and it also tells the direction.

  When velocity is positive, the object is moving up.

  When velocity is negative, the object is moving down.

1 ACTIVITY: Falling Parachute

Work with a partner. You are gliding to the ground wearing a parachute. The table shows your height above the ground at different times.

Time (seconds)	0	1	2	3

a. Describe the pattern in the table. How many feet do you move each second? After how many seconds will you land on the ground?

b. What integer represents your speed? Give the units.

c. Do you think your velocity should be represented by a positive or negative integer? Explain your reasoning.

d. What integer represents your velocity? Give the units.

2 ACTIVITY: Rising Balloons

Key Idea

Absolute Value

Words The **absolute value** of an integer is the distance between the number and 0 on a number line. The absolute value of a number a is written as $|a|$.

4 units   4 units

−5 −4 −3 −2 −1 0 1 2 3 4 5
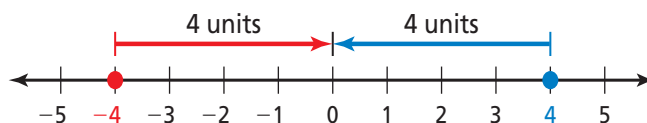

Numbers $|-4| = 4$ $|4| = 4$

EXAMPLE 1 Finding Absolute Value

Find the absolute value of 2.

Graph 2 on a number line.

−4 −3 −2 −1 0 1 2 3 4

2

The distance between 2 and 0 is 2.
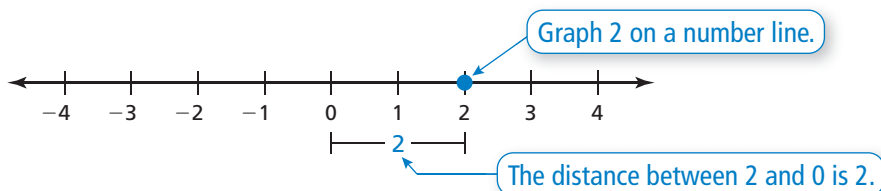

So, $|2| = 2$.

EXAMPLE 2 Finding Absolute Value

Find the absolute value of −3.

Graph −3 on a number line.

−6 −5 −4 −3 −2 −1 0 1 2

Remember

A number line can be used to compare and order integers. Numbers to the left are less than numbers to the right. Numbers to the right are greater than numbers to the left.

Graph 1 on a number line.

Graph $|-4| = 4$ on a number line.

$|-4|$

$$\begin{array}{c} -3 \quad -2 \quad -1 \quad 0 \quad 1 \quad 2 \quad 3 \quad 4 \quad 5 \end{array}$$

1 is to the left of $|-4|$.

EXAMPLE 4 **Real-Life Application**

Substance	Freezing Point (°C)
Butter	35
Airplane fuel	−53
Honey	−3
Mercury	−39
Candle wax	55

The *freezing point* is the temperature at which a liquid becomes a solid.

   a. Which substance in the table has the lowest freezing point?

   b. Is the freezing point of mercury or butter closer to the freezing point of water, 0°C?

a. Graph each freezing point.

| Airplane fuel −53 | Mercury −39 | | Honey −3 | | | Butter 35 | Candle wax 55 |

$$-60 \quad -50 \quad -40 \quad -30 \quad -20 \quad -10 \quad 0 \quad 10 \quad 20 \quad 30 \quad 40 \quad 50 \quad 60$$
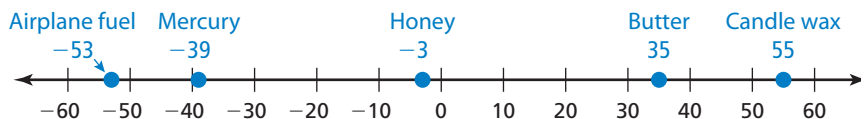

Airplane fuel has the lowest freezing point, $-53°$C.

b. The freezing point of water is 0°C, so you can use absolute values.

Mercury: $|-39| = 39$ **Butter:** $|35| = 35$

Because 35 is less than 39, the freezing point of butter is closer to the freezing point of water.

EXAMPLE **3** Real-Life Application

Which continent has the greater range of elevations?

	North America	Africa
Highest Elevation	6198 m	5895 m
Lowest Elevation	-86 m	-155 m

To find the range of elevations for each continent, subtract the lowest elevation from the highest elevation.

North America

$$
\begin{aligned}
\text{range} &= 6198 - (-86) \\
&= 6198 + 86 \\
&= 6284 \text{ m}
\end{aligned}
$$

Africa

$$
\begin{aligned}
\text{range} &= 5895 - (-155) \\
&= 5895 + 155 \\
&= 6050 \text{ m}
\end{aligned}
$$
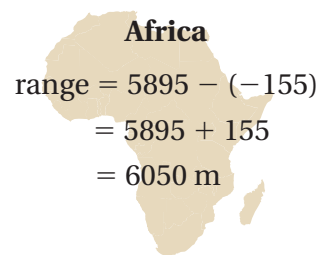

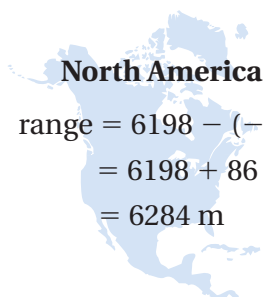

Because 6284 is greater than 6050, North America has the greater range of elevations.

1.4 Multiplying Integers

Essential Question Is the product of two integers *positive*, *negative*, or *zero*? How can you tell?

1 ACTIVITY: Multiplying Integers with the Same Sign

Work with a partner. Use repeated addition to find 3 • 2.

Recall that multiplication is repeated addition. 3 • 2 means to add 3 groups of 2.

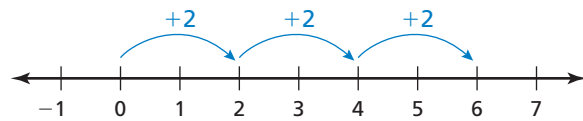

Now you can write

$3 \cdot 2 = \boxed{} + \boxed{} + \boxed{}$

$= \boxed{}.$

So, 3 • 2 = $\boxed{}$.

2 ACTIVITY: Multiplying Integers with Different Signs

Work with a partner. Use repeated addition to find 3 • (−2).

3 • (−2) means to add 3 groups of −2.

Now you can write

$3 \cdot (-2) = \boxed{} + \boxed{} + \boxed{}$

$= \boxed{}.$
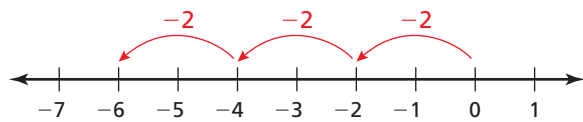

So, 3 • (−2) = $\boxed{}$.

3 ACTIVITY: Multiplying Integers with Different Signs

Work with a partner. Use a table to find −3 • 2.

Describe the pattern of the products in the table. Then complete the table.

2	•	2	=	4
1	•	2	=	2
0	•	2	=	0
−1	•	2	=	$\boxed{}$
−2	•	2	=	$\boxed{}$
−3	•	2	=	$\boxed{}$

So, −3 • 2 = $\boxed{}$.
