- 15) The difference between drizzle and rain has to do with the size of the drops, not how much water is actually falling from the sky. If rain consists of drops larger than 0.02 in. in diameter, and drizzle consists of drops less than 0.02 in. in diameter, what can you say about the surface area and volume of rain and drizzle?

$$\text{Rain: } SA > 0.0013 \text{ in}^2$$

$$V > .000004 \text{ in}^3$$

$$\text{Drizzle: } SA < 0.0013 \text{ in}^2$$

$$V < .000004 \text{ in}^3$$

- 16) A spherical scoop of ice cream with a diameter of 4 cm rests on top of a sugar cone that is 10 cm deep and has a diameter of 4 cm. If all of the ice cream melts into the cone, what percent of the cone will be filled?

$$\begin{aligned} \text{Cone } V &= \frac{1}{3} \pi r^2 H \\ &= \frac{1}{3} \times \pi \times 2^2 \times 10 \\ &= \frac{40}{3} \pi \end{aligned}$$

$$\begin{aligned} \text{Scoop } V &= \frac{4}{3} \times \pi \times 2^3 \\ &= \frac{32}{3} \pi \end{aligned}$$

$$\begin{aligned} \text{Percent} &= \frac{\text{Scoop}}{\text{Cone}} \\ &= \frac{\frac{32}{3} \pi}{\frac{40}{3} \pi} \\ &= \frac{32}{40} = .8 \\ &= 80\% \end{aligned}$$

- 17) What are the formulas for the volumes of a sphere, a cone with a height equal to its radius, and a cylinder with its height equal to its radius? How are these formulas related?

$$\text{Sphere} = \frac{4}{3} \pi r^3$$

$$\begin{aligned} \text{Cone} &= \frac{1}{3} \pi r^2 H \\ &= \frac{1}{3} \pi r^2 \times r \\ &= \frac{1}{3} \pi r^3 \end{aligned}$$

$$\begin{aligned} \text{Cylinder} &= \pi r^2 H \\ &= \pi r^2 \times r \\ &= \pi r^3 \end{aligned}$$

$$\frac{\text{Ratio}}{4} = \frac{4\pi r^2}{\frac{4}{3}\pi r^3}$$

Proportion!
Cross-Multiply!

$$\frac{16}{3}\pi r^3 = 4\pi r^2$$

$$\frac{16}{3}r = 4$$

$$r = .75 \text{ in}$$

Relationship:

$$\text{Volume of Sphere} = \text{Volume of Cone} + \text{Volume of Cylinder}$$
