

2.1 – Congruent Figures

- 1) Two figures are congruent when they have the _____ and the _____.
- 2) In two shapes, another name for *matching sides* is _____.
- 3) In two shapes, another name for *matching angles* is _____.

Tell whether the triangles are *congruent* or *not congruent*.

The figures are congruent. Name the corresponding angles and the corresponding sides.

$\angle _ \cong \angle _ \quad _ \cong _$
 $\angle _ \cong \angle _ \quad _ \cong _$
 $\angle _ \cong \angle _ \quad _ \cong _$

$\angle _ \cong \angle _ \quad _ \cong _$
 $\angle _ \cong \angle _ \quad _ \cong _$
 $\angle _ \cong \angle _ \quad _ \cong _$
 $\angle _ \cong \angle _ \quad _ \cong _$

Tell whether the two figures are congruent. Explain your reasoning.

Describe and correct the error in telling whether the two figures are congruent.

10)

✗ Both figures have four sides and corresponding angle measures are equal. So, they are congruent.

11) The pentagons are congruent. Determine whether the statement is *true* or *false*. Explain your reasoning.

a) $\angle B$ is congruent to $\angle C$.

b) Side MN is congruent to side AE .

c) $\angle B$ corresponds to $\angle O$.

d) Side BC is congruent to side PO .

e) The sum of the angle measures of $LMNOP$ is 540° .

f) The measure of $\angle B$ is 120° .
